WDVA 5000 Watts In Stereo

Jan. 18, 1988

Mr. Bill Burrows
709 Division Street
Glouster City, New Jersey
08030-2337

Dear Bill,

Thanks for your letter... There's no denying you captured our signal...AND IN STEREO, TOO! We certainly appreciate your tape, proving that you were able to pick up our broadcast.

In answer to your questions, W D V A broadcasts on 1250 KHz with 5,000 watts power, 24 hours a day in stereo. Our transmitter and studios are located about two miles west of the center of Danville, just off route U.S. 58.

Our coverage area is generally limited to the city of Danville, Pittsylvania, Halifax and Henry Counties in Virginia, and Person, Caswell, and Rockingham Counties in North Carolina.

We are a CBS Radio affiliate, and receive network news feeds from both the Virginia and North Carolina News Networks as well as some programming from Mutual.

Our format includes Country Music, plus a heavy concentration of sports features, including University of Virginia football and basketball, regular CBS football and baseball broadcasts as well as local high school sports. We also feature nine local newscasts daily.

I wish I could answer your question concerning our DX letters, but until now, no record of them has been kept. However, with your letter, we now intend to keep a file to determine how often and from how far they come.

Again, thanks for your diligence and patience, and for letting us know just how well our signal reached your area.

Sincerely,

Henry Gilbert

Henry Gilbert,
News Director
